## ***Moovcare® is a prescribed medical application to remotely and continuously manage the follow up of lung cancer patients.***

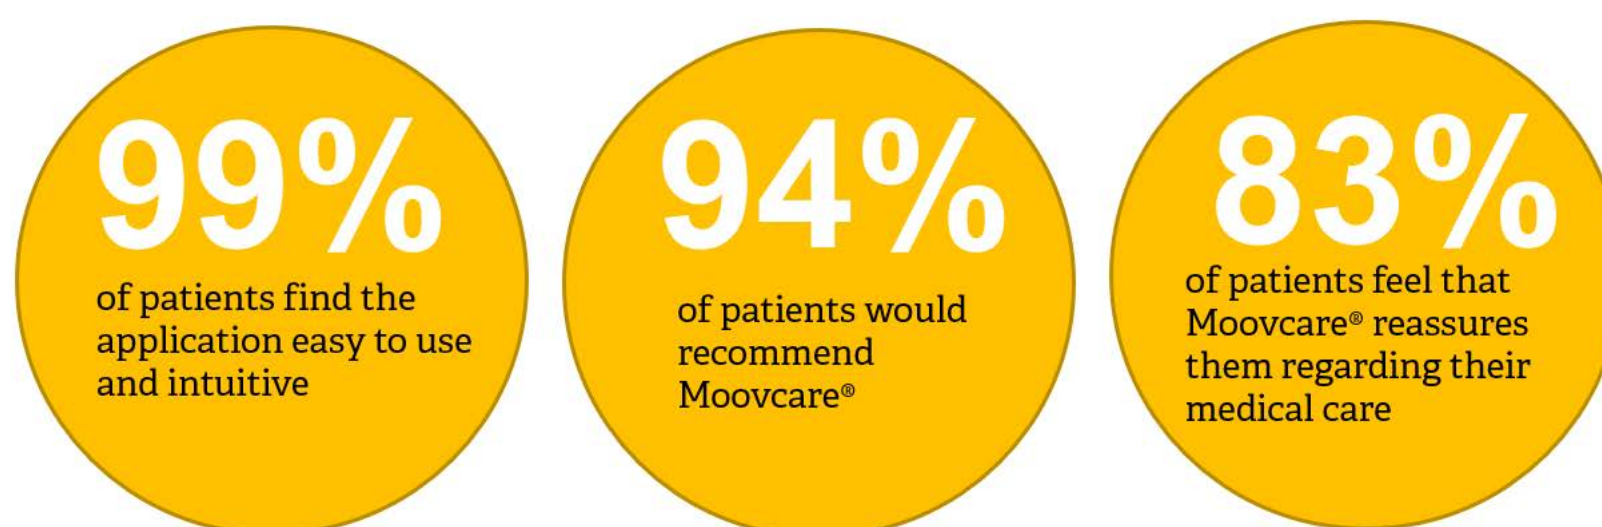

### ***How does Moovcare® work?***

By filling out once a week a simple questionnaire based on your symptoms, Moovcare® detects relapses and complications related to the disease.

If an anomaly is detected, a notification will be immediately sent to the medical team, who can intervene if necessary.

Moovcare® is easy to use: once a week, you receive the questionnaire in your personal mailbox or via a notification if you use the native application.

Thanks to Moovcare®, you become an active participant of your health, since you keep a permanent link with your physician who monitors your symptoms remotely, via a dashboard and notifications.

Clinical studies have shown that early intervention can help providing the appropriate treatment, resulting in optimal health care and a better quality of life.

Moovcare® has been validated by clinical studies conducted in France, and published in renowned scientific journals (JAMA, JNCI, and JTO.)
